

ACHIEVE MORE TOGETHER

The Beekeeper mock interview
preparation kit

About us

Beekeeper is a fast growing SaaS company disrupting the way 2 billion people working “out in the field” communicate within their companies. Are you eager to shape the future of traditional industries like hospitality, retail, manufacturing or transportation using latest mobile technology?

We are a lean development team that moves fast. We push to production multiple times a day and continuously iterate on our products. This is an exciting time to join if you truly want to be involved in developing the core product at a tech driven company.

As a Software Engineer you have the opportunity to work on all of our software stack and learn about state-of-the art web and mobile development. Technologies that you will work on are ElasticSearch, Realm.io, RabbitMQ, Backbone.js, Docker, Amazon Web Services, MySQL and interfacing them with different programming languages like Python, Java, Objective-C and Javascript.

Meet us on **Friday, February 22 at 14:15 at CAB H 52**

Technical Interview Process

At Beekeeper the standard technical interview process is split into four parts:

1. Preliminary Phone Screen

This is the first interview, which lasts up to 45 minutes. In this interview, the candidate gets to know the Beekeeper culture and what it is like to work with us. Similarly, we get to know the candidate a bit better than just the CV we have seen. There might also be a small technical question at this stage of the interview. There is no preparation needed for this interview.

2. Programming Interview - **mock interview**

This is the next stage. The candidate gets a problem which needs to be solved. The candidate can choose a language (either Java, C#, JavaScript or Python) in a programming environment of their choice.

It is recommended to practise programming in the chosen language, however, the problem space does not include complex algorithms nor does it require the use of special frameworks.

Don't forget to bring your laptop with you.

3. Knowledge Interview - **mock interview**

In this interview, the candidate is asked general questions about computer science. The space mostly includes areas relevant to a Software as a Service Company, in example topics around building a scalable web service.

It is recommended to brush up on technologies which are related to web services in general.

4. Test Day

This is the final chapter of the legendary Beekeeper Interview Process. At this stage you come to the Beekeeper Office, get a task assigned and have the opportunity to work with us on our

product. During this day you get an impression of the entire Beekeeper experience. You will have the opportunity to interact with every single employee at Beekeeper and at the end of the day have a good idea on what it feels like to be working with us.
